

Strategic migration. Smart modernization.

Pellera Technologies and Red Hat streamline and simplify virtualization.

Pellera Technologies brings deep experience and proven results to help organizations migrate to OpenShift Virtualization. With a structured approach tailored to your unique environment and goals, we can help you navigate changes with confidence—delivering a full lifecycle framework from strategic planning to execution and ongoing operations.

Our proven three-phase process

Phase 1: Advise

We'll work with your team to understand your business goals and develop a path forward that makes sense for your unique environment and needs.

Phase deliverables

- Executive advisory report
- Platform comparison matrix
- High-level migration roadmap, preliminary timeline, and cost estimate
- Skills, gaps, and training plan

Key benefits

-  Clear platform strategy (on-prem, cloud, hybrid)
-  Strategic migration roadmap
-  Buy-in across stakeholders (IT, Security, Finance, Business)
-  High-confidence cost, risk, and TCO insights

Phase 2: Assess

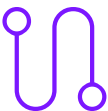

We'll take a look at your current environment to understand what migration will look like, how to seamlessly integrate with your existing technologies, where modernization makes sense, and how to mitigate risk and maximize value.

Phase deliverables

- Current state analysis
- Migration feasibility review
- Risk assessment and mitigation plan
- Cost and ROI analysis
- Detailed migration strategy and roadmap
- Implementation plan

Key benefits

-  360-degree view of current environment to enable informed decision-making
-  Risk identification to ensure a secure and compliant migration
-  Financial clarity with TCO and ROI analysis
-  Strategic alignment across teams
-  Understanding of modernization opportunities

Phase 3: Mobilize

This is where the rubber meets the road. Strategic plans become tangible OpenShift Virtualization environments that empower you with control, flexibility, performance, and compliance.

Phase deliverables

- Migrated and validated applications on OpenShift Virtualization
- Application validation and performance reports
- Cutover logs and rollback documentation
- Updated runbooks and CMDB entries
- Decommission plan for source systems
- Post-migration support handoff and operational ownership

Key benefits

-  Landing zones and infrastructure provisioned
-  Migration waves defined and tracked
-  Playbooks and automation in place
-  Workloads validated, secured, and transitioned
-  Cutover and rollback procedures operationalized
